

WC partition system PRIMO F
KEMlight

Partition system PRIMO F

with integrated KEMlight indicator

PRIMO F stands for smooth surfaces and thus a high-quality appearance as well as for stability and thus for durability like no other partition system.

The 30mm thick sandwich composite construction is covered by two 3mm thick decorative HPL solid core panels and contains a very robust and circumferential PVC profile frame that massively stiffens each element.

massively stiffens each element.

Optionally, PRIMO F is also available with special antibacterial surfaces with anti-fingerprint function.

This construction comes standard with a soft-close comfort locking system for safe and quiet closing.

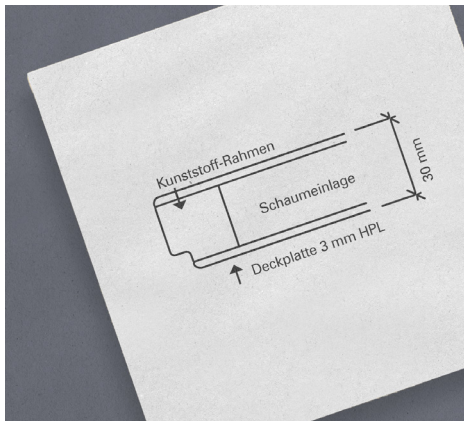

7 years warranty is a matter of course for all durable quality products from KEMMLIT.

The special version KEMlight with LED Vacant/Occupied indicator sets a visual absolute highlight in the design of the sanitary room and offers the user the additional function to distinguish a vacant from an occupied cubicle at a glance.

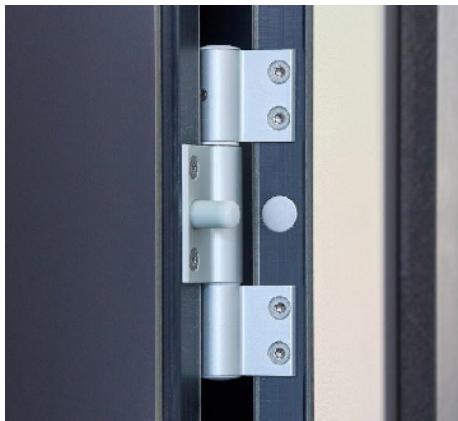

The LED indicator can be conveniently and individually controlled with an app, so that power-saving settings such as adjusting the lighting to the operating hours of the building are easily and intuitively possible.

KEMlight in detail
